

FIRMS AND MARKETS II

PMAP 8141: Economy, Society, and Public Policy

October 15, 2019

*Fill out your reading report
on iCollege!*

PLAN FOR TODAY

Surplus, taxes, incidence, and DWL

Changes in supply and demand

Price taking

Escaping the price taking world

SURPLUS, TAXES, INCIDENCE, AND DWL

Demand: $P = -0.5Q + 20$

Supply: $P = 0.25Q + 2$

Consumer surplus

Difference between WTP and price

How good of a deal consumer gets

Producer surplus

Difference between price and WTA

How good of a deal producer gets

$$S : P = 2 + 0.25Q$$

$$D : P = 20 - 0.5Q$$

WHY DO GOVERNMENTS TAX?

Raise revenue for services

Redistribute resources

**Encourage or
discourage consumption**

WHAT HAPPENS WHEN GOVERNMENTS TAX?

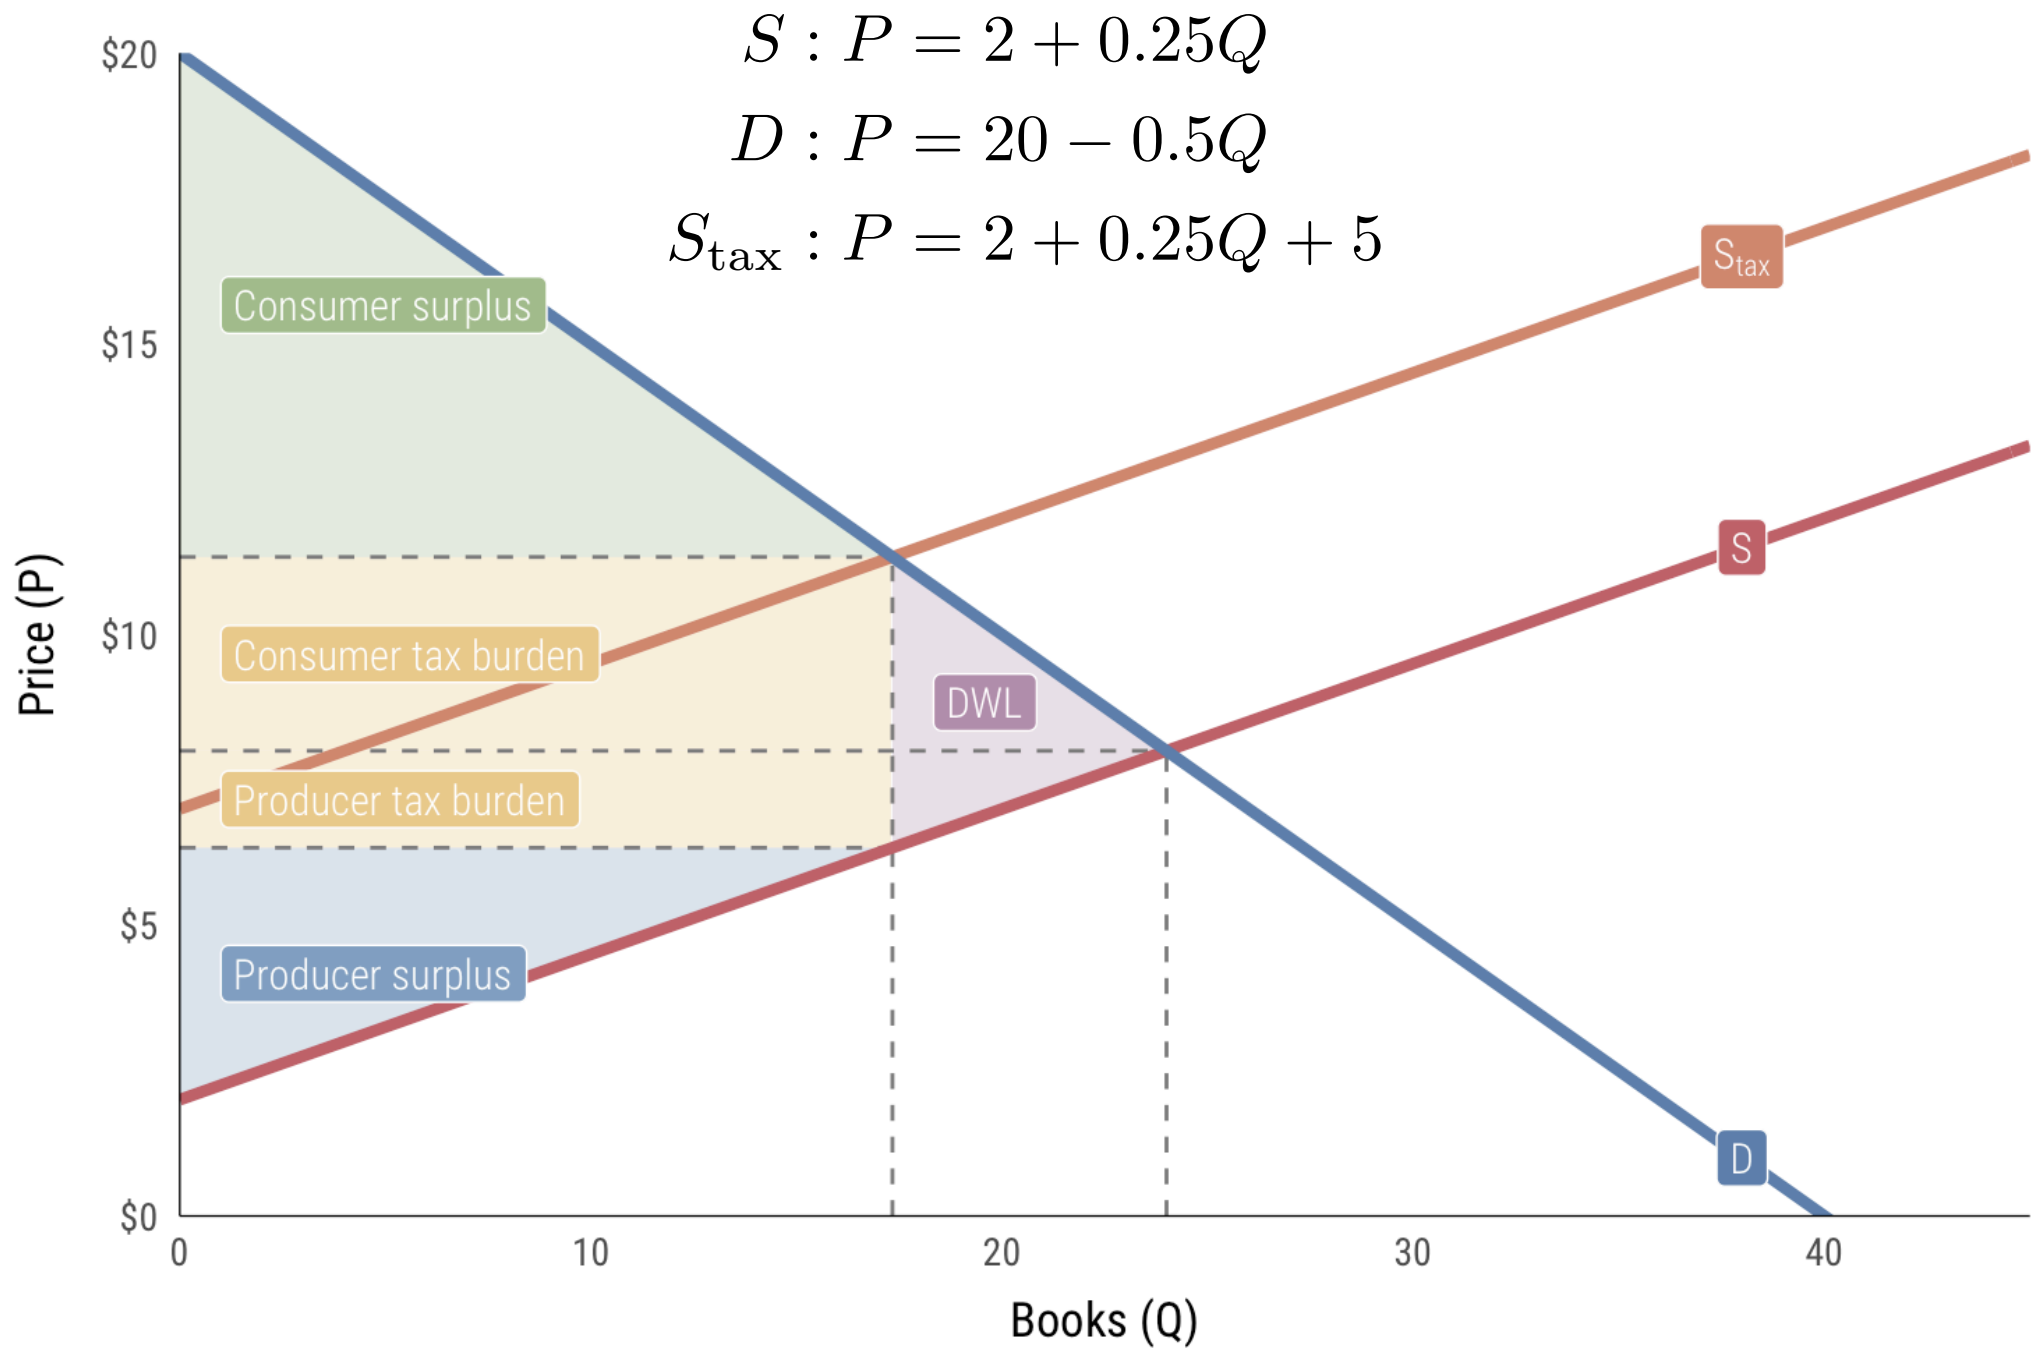

Revenue raised for public goods

Resources redistributed

**Markets distorted;
loss of efficiency**

$$S_1 : P = 2 + 0.25Q$$

$$S_3 : P = 2 + 0.05Q$$

$$D_1 : P = 10 - 0.05Q$$

$$D_3 : P = 20 - 0.5Q$$

$$S_{1 \text{ tax}} : P = 2 + 0.25Q + 5$$

$$S_{3 \text{ tax}} : P = 2 + 0.05Q + 5$$

$$S_2 : P = 2 + 0.25Q$$

$$S_4 : P = 2 + 1.5Q$$

$$D_2 : P = 20 - 2Q$$

$$D_4 : P = 20 - 0.5Q$$

$$S_{2 \text{ tax}} : P = 2 + 0.25Q + 5$$

$$S_{4 \text{ tax}} : P = 2 + 1.5Q + 5$$

P and Q at competitive equilibrium

Size of producer and consumer surpluses

P and Q at tax equilibrium

Size of DWL

Producer and consumer incidence

1: Elastic demand

$$S_1 : P = 2 + 0.25Q$$

$$D_1 : P = 10 - 0.05Q$$

$$S_{1 \text{ tax}} : P = 2 + 0.25Q + 5$$

1: Elastic demand

$$S_1 : P = 2 + 0.25Q$$

$$D_1 : P = 10 - 0.05Q$$

$$S_{1 \text{ tax}} : P = 2 + 0.25Q + 5$$

2: Inelastic demand

$$S_2 : P = 2 + 0.25Q$$

$$D_2 : P = 20 - 2Q$$

$$S_{2 \text{ tax}} : P = 2 + 0.25Q + 5$$

2: Inelastic demand

$$S_2 : P = 2 + 0.25Q$$

$$D_2 : P = 20 - 2Q$$

$$S_{2 \text{ tax}} : P = 2 + 0.25Q + 5$$

3: Elastic supply

$$S_3 : P = 2 + 0.05Q$$

$$D_3 : P = 20 - 0.5Q$$

$$S_{3 \text{ tax}} : P = 2 + 0.05Q + 5$$

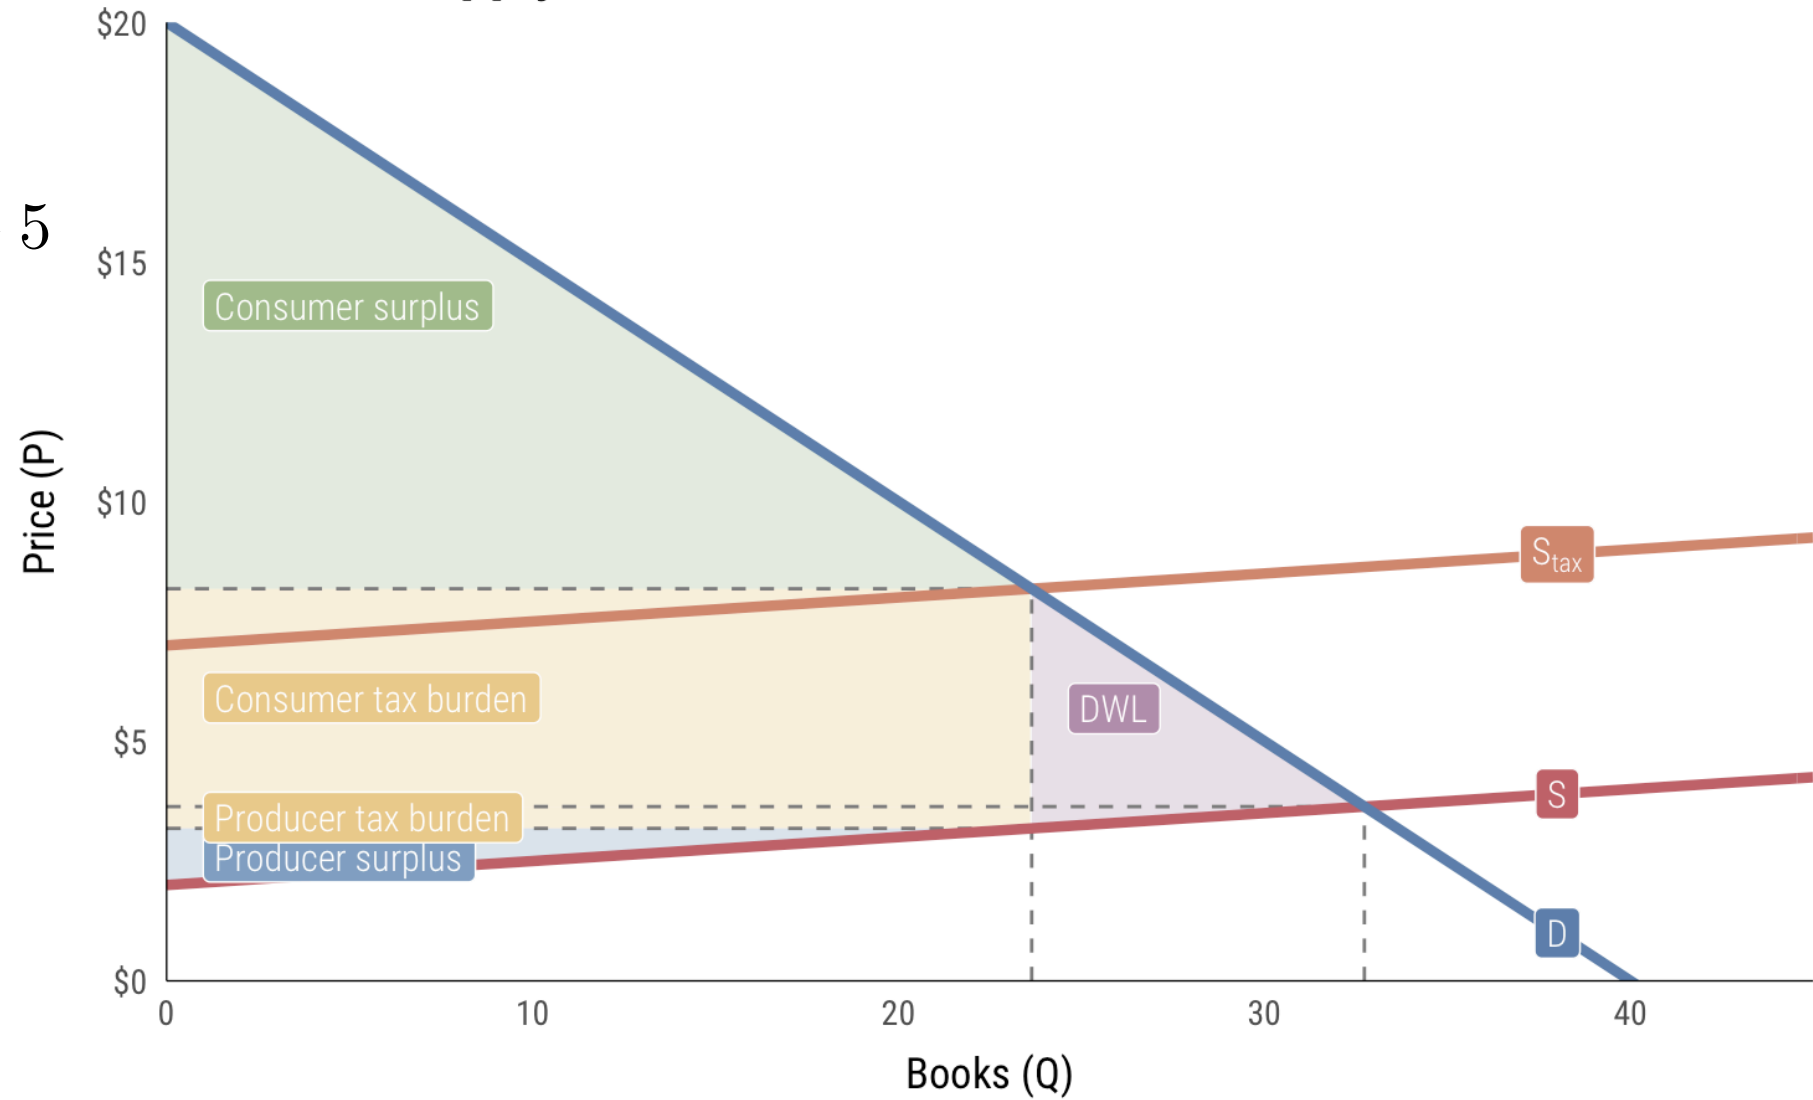

3: Elastic supply

$$S_3 : P = 2 + 0.05Q$$

$$D_3 : P = 20 - 0.5Q$$

$$S_{3 \text{ tax}} : P = 2 + 0.05Q + 5$$

4: Inelastic supply

$$S_4 : P = 2 + 1.5Q$$

$$D_4 : P = 20 - 0.5Q$$

$$S_{4 \text{ tax}} : P = 2 + 1.5Q + 5$$

4: Inelastic supply

$$S_4 : P = 2 + 1.5Q$$

$$D_4 : P = 20 - 0.5Q$$

$$S_{4 \text{ tax}} : P = 2 + 1.5Q + 5$$

TAX INCIDENCE AND €

**Incidence depends on
elasticity of supply or demand**

**Tax burden falls on those
least able to escape it**

INCIDENCE WITHIN CONSUMERS

Progressive taxes

Rich pay more

Income taxes (but loopholes)

Regressive taxes

Poor pay more

Sales taxes, payroll taxes

TAX FAIRNESS

Benefits principle

Those who benefit from public spending should bear the burden of the tax

Ability-to-pay principle

Those with a greater ability to pay a tax should pay more tax

CHANGES IN SUPPLY AND DEMAND

CHANGE IN DEMAND

CHANGE IN DEMAND

Demand higher at every possible point

Structural change

**Price increases; quantity increases
(or decreases/decreases)**

Supply remains the same

People start preferring hamburgers over pizza

CHANGE IN QUANTITY DEMANDED

Prices and quantity change...

...but not because of structural issues

Movement *along* demand curve

Supply remains the same

Price of pizza changes

Two ways to get
from 24 to 31ish

A → C

Change in quantity
demanded
Only price changes

A → B

Change in demand
New demand curve

CAUSES OF SHIFTING DEMAND

Change in price of complementary goods

Change in price of substitute goods

Change in population of buyers

Change in income

Change in preferences

Orange market

Dr. Oz promotes new fad diet where everyone eats 10 oranges a day

Car market

Consumer income rises

Car market

Gas prices double

Shoe market

More manufacturers make shoes

Lettuce market

Price drops by 10 cents

CHANGE IN SUPPLY

CHANGE IN SUPPLY

Supply higher at every possible point

Structural change

**Price increases; quantity increases
(or decreases/decreases)**

Demand remains the same

Cost of production changes because of technology or input costs

CHANGE IN QUANTITY SUPPLIED

Prices and quantity change...

...but not because of structural issues

Movement *along* supply curve

Demand remains the same

Price of product changes

Two ways to get
from 24 to 17ish

A → C

Change in quantity
supplied
Only price changes

A → B

Change in supply
New supply curve

CAUSES OF SHIFTING SUPPLY

Change in cost of inputs

Change in cost of production

Change in weather

Change in number of suppliers

Expectation of lower prices

Car market

New engine design reduces production costs

Orange market

Freeze in Florida kills 50% of the crop

Shoe market

Price of shoes increases

Shoe market

Price of leather increases

PRICE TAKING

COST MINIMIZATION

REVENUE MAXIMIZATION

PROFIT MAXIMIZATION

OPTIMAL THINGS

Max π : $MC = MR$

Best Q: Demand = MC

**In perfect competition,
Demand = MC = MR = P**

Market demand

Firm demand

PRICE TAKING

Firm decisions have no impact on the price of a good

You're stuck with whatever the prevailing market price is \pm some markup

BUT WHAT IF???

What if you could affect the price?

Would you want to?

Costs matter.

Set the price to *your* MC, maximize *your* profit.

ESCAPING THE PRICE TAKING WORLD

Escape with market power!

Ability to influence market prices

This is why people get MBAs;
move market away from perfect competition price

WAYS TO ESCAPE

Price discrimination

Monopolies

Switching costs

Branding and differentiation

Cost and input controls

Government regulation

PRICE DISCRIMINATION

**With perfect information,
firms can set individualized
demand curves for customers**

Price = WTP

Lyft/Uber

Airplane tickets

Amazon

PRICE DISCRIMINATION

MONOPOLIES

**The whole market is only one firm,
so market demand *is* firm demand**

Monopolists will naturally produce less quantity at higher prices than firms in competitive markets

Creates deadweight loss, just like taxes

MONOPOLIES

Math time!

$$P = -Q + 40$$

$$TC = Q^2 + 140$$

What they'll charge

$P = MC = \text{best } Q \text{ under competition}$

$MR = MC = \max(\pi)$

Average total cost Demand Marginal cost Marginal revenue

Average total cost	Marginal cost	Consumer surplus	Producer surplus
Demand	Marginal revenue	Deadweight loss	

NATURAL MONOPOLIES

Big expensive things with large capital outlays and low marginal cost

Generally more efficient to just have one firm handle it

Utilities

Public transportation

— Average total cost — Demand — Marginal cost — Marginal revenue

— Average total cost — Demand — Marginal cost — Marginal revenue

SWITCHING COSTS

**Make it harder for consumers
to switch away from you**

Brand-exclusive benefits

Technology constraints

Search costs

Network costs

BRANDING + DIFFERENTIATION

Make your stuff nonsubstitutable

Advertising

Brand loyalty

BRANDING + DIFFERENTIATION

If people are stuck with you
(or like you a lot, or believe in your product,
or if your stuff generally isn't substitutable)
you can charge them more

**Markup depends
on elasticity**

ELASTIC DEMAND

INELASTIC DEMAND

COST AND INPUT CONTROLS

Own the means of production

Control scarce inputs

Control cheap supply chains

GOVERNMENT REGULATION

Make the government stop others from competing with you

Patents and intellectual property

Licensing

Prohibition of competition
